MOOSE HARVEST DATA RECONCILIATION REPORT

Prepared by: Craig Fager
Project No: 580221
Date: January 23, 1993

PURPOSE, SOURCE, AND CONTENT

The purpose of this project is to provide Department personnel working on the Wildlife Management PEIS with a summary of Moose Harvest Survey data. Moose data were compiled from Harvest Survey Reports and reconciled against other documents for accuracy. This report includes data at the district, regional, and statewide levels for the period 1971-1991. There are 2 parts to this report: 1) Moose Hunting and Harvest Data Summary, 2) Moose Harvest Data Reconciliation Report.

Because moose hunting licenses are controlled through special drawings and the number of license holders is small when compared to other species, the percentage of total moose hunters sampled is very high statewide and 100% for many moose hunting districts. Consequently, most moose harvest data were very good, with few unknowns and very small or nonexistent confidence intervals. Most problems encountered during data compilation and detailed in this report were related to changes in Harvest Survey Report content and data analysis.

The Moose Hunting and Harvest Data Summary contains 24 variables compiled at the hunting district, regional, and statewide levels for the period 1971-1991. Variables were selected based on reporting categories and formats for the entire report period. The following is a list of variables and their report heading abbreviations:

YEAR
AREA = 5 digit Hunting District, Region, or State
TSPLIC = Total Special Licenses
R_HNTR = Resident Hunters
N_HNTR = Nonresident Hunters
TTL_HNTR = Total Hunters
R_DAYS = Resident Hunter Days (1986-1991)
N_DAYS = Nonresident Hunter Days (1986-1991)
TTL_DAYS = Total Hunter Days (1986-1991)
AVG_DAYS = Average Hunter Days (1973-1985)
R_CALF = Resident Calf Harvest
R_COWS = Resident Cow Harvest
R_BULLS = Resident Bull Harvest
N_CALF = Nonresident Calf Harvest
N_COWS = Nonresident Cow Harvest
N_BULLS = Nonresident Bull Harvest
TTL_CALF = Total Calf Harvest
TTL_COWS = Total Cow Harvest
TTL_BULLS = Total Bull Harvest

TTL_HARVST = Total Resident and Nonresident Moose Harvest
RPERSUCC = Resident Percent Success
NPERSUCC = Nonresident Percent Success
TPERSUCC = Total Percent Success
NOTES = Documentation of Source and Reconciliatory Calculations

MAJOR CHANGES IN MOOSE HARVEST SURVEYS BY TIME PERIOD

1986-1991

Moose Harvest Survey data were consistent in report content and format for the period 1986-1991. Report prefaces were added in 1988 and detailed analysis methods and license holder sampling percentages were documented. Moose hunter effort for this period was reported as: 1) Resident Days, 2) Nonresident Days, and 3) Total Days. All variables except average days hunted were available; therefore, no reconciliatory computations were necessary for inclusion of these data in the Moose Hunting and Harvest Data Summary.

1981-1985

During the period 1981 to 1985 the Moose Harvest Survey was divided into 3 independent reports: 1) Resident Moose Harvest, 2) Nonresident Moose Harvest, and 3) Combined Moose Harvest. Little documentation existed within the Moose Harvest Surveys prior to 1986. Hunter effort was reported as average days and only combined average days was compiled in the Data Summary. Hunting districts with more than one special application option (for example 310-01 and 310-02) posed special problems because data for all district options were not totaled within the Harvest Survey. These variables were manually combined and percent success was recalculated by dividing total estimated harvest by the total estimated number of hunters.

1978-1980

Moose Harvest Survey reporting categories for the period 1978 -1980 were identical to the 1981-1985 period. However,the Nonresident Moose Harvest Report was split into two independent reports (B10 and B2). This distinguished those nonresident moose hunters that held big game combination licenses from those that did not. Where nonresident harvest within the same hunting district was recorded in both reports, variables were combined and percent success recalculated. This situation was rare and overall nonresidents contributions to moose harvest was small during this period. A more common problem with the Nonresident Moose Harvest Report was the phrase "No Data For This District" which indicated no survey questionnaires were returned by the nonresident hunter(s).

1973-1977

Changes in Moose Harvest Survey reporting categories and format during the 1973-1977 period created bias in cow and bull moose harvests. This was because harvest was tracked as male or female and further as adult or calf. Cow and/or bull harvest values were inflated by the number of calves harvested. This was because the sex of the adult and calf harvest was unknown where more than one sex of moose was harvested. Summary data affected by this bias were flagged in the note section. Total harvest estimates were not affected by this bias.

1971-1972

Reporting categories for the Moose Harvest Survey from 1971-1972 were identical to 1973-1977 except for hunter effort data, which was not collected for these 2 years. Another change, independent of the Moose Harvest Survey was the 2 digit hunting district designations. In almost all cases, 2 digit area boundaries matched later, 3 digit hunting district boundaries. In these cases the area number was recorded in the note section of the 3 digit hunting district because Summary data were compiled in the order 1991-1971.
